Ecosystem Enhancement Program
Subregional Boundaries

Data Sources:
The sub-region boundaries are based on a combination of geographic climate/watershed boundaries and social boundaries using a 'conservation neighborhood' approach. Base map sources include Columbia Basin Trust Basin Hydrologic Regions as Indicated by Patterns of Climate and Surface Runoff (Carver et. al. 2017) and Kootenay Conservation Program Proposed Conservation Neighborhoods (Nov 2017 Draft).

Watershed, river, stream, road, and community data are downloaded from the British Columbia Data Catalogue.

Datum/Projection: North American 1983/UTM Zone 11N
